Profile Summary

Final-year Computer Science and Engineering undergraduate specializing in Data Science, with hands-on experience in machine learning and full-stack development. Skilled in building end-to-end data-driven solutions – from predictive modeling and intelligent security systems to cloud-integrated web platforms – using Python, Scikit-learn, TensorFlow, Flask, and SQL. Strong foundation in data structures, algorithms, and statistical analysis, complemented by proven leadership across IEEE student chapters. Seeking to deliver measurable business impact through data-driven and analytical solutions.

Education

Mar Athanasius College Of Engineering — Kothamangalam, Kerala
B.Tech in Computer Science and Engineering (Data Science) — *Aug 2023 – Present* *CGPA: 8.74*

AJJM — Thalayolaparambu, Kerala
Higher Secondary – Science — *July 2020 – May 2022* *97.67%*

St. Joseph's EM School — Keezhoor, Kerala
Secondary – CBSE — *June 2019 – May 2020* *93.66%*

Projects

Cloud-Based Intelligent Smart City Digital Twin Platform *2025*

- Developed a cloud-based **digital twin** model representing the urban infrastructure and traffic systems of Kothamangalam town.
- Collected and analyzed real-time traffic data to identify congestion patterns and peak traffic periods using **LSTM-based predictive analytics**.
- Implemented **cloud database integration** and **time-series data processing** to support intelligent urban planning applications.

Disease Predictor Using Apriori Algorithm *2025*
Python, Flask, Pandas, Mlxtend, *HTML/CSS/JavaScript*

- Built a healthcare symptom checker that predicts diseases using **Apriori association rule mining** algorithms.
- Accepts three symptoms as input and computes **support**, **confidence**, and **lift** metrics to determine disease likelihoods.
- Displays matched doctor recommendations including department, doctor name, and contact information.

Disaster Relief Management System (DRMS) *2025*
Python, SQL

- Built a system to efficiently manage disaster relief operations, enabling coordinated **tracking of resources and personnel**.
- Developed using **Python** and **SQL** with features for storing, retrieving, and analyzing **disaster-related data** in real time.

Skills

Languages: Python, R, HTML, CSS, JavaScript, SQL

Libraries/Frameworks: Scikit-learn, TensorFlow, Pandas, NumPy, Flask

Core Concepts: Data Structures & Algorithms, Operating Systems, Object-Oriented Programming (OOPs), Data Analytics, Machine Learning

Developer Tools: Git, GitHub

Soft Skills: Leadership, Team Collaboration, Communication, Problem Solving, Time Management, Adaptability

Volunteering

IEEE CS MACE – *Chair (Present)*

IEEE IAS MACE – *Secretary (2023–2024)*

IEEE VTS MACE – *Chair (2025)*

FUSION IEEE MACE – *Event Lead (Feb 2025)*

Achievements

- Runner-up in the Interzone Chess Competition, demonstrating competitive performance and strategic thinking.
- Awarded Best NSS Volunteer in 2024 for outstanding contribution to community service initiatives, and recognized as an IEEE Outstanding Volunteer in 2026 for dedicated contributions to IEEE activities.
